

Hillrom Equipment Planning Solution (HEPS)

HEPS is designed to support the changing needs of the healthcare facility, so you can deliver comprehensive care.

Are you looking for a better way to manage healthcare equipment, to meet the clinical needs of your patients?

Would improved visibility of your current assets minimise operational challenges?

HEPS can help improve patient safety and risk management to support healthcare facilities with frame and surface equipment planning, now and in the future.

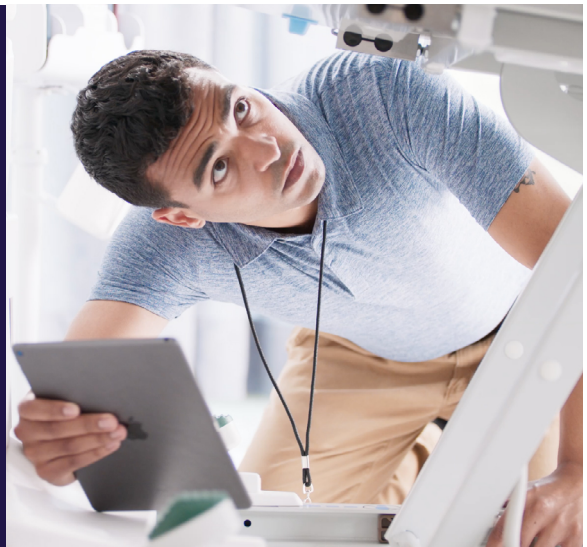

- Better understanding of the current condition of your bed frame and surface fleet to address operational challenges and improve both patient and caregiver safety.
- Ensure your facility has adequate provision of the right equipment to meet national guidelines, enhance clinical outcomes and support falls and pressure injury prevention protocols.
- The ability to update information on the facility medical equipment asset register.
- Based on the data collected, detailed reports can help identify potential risks and provide recommendations to help plan and manage capital budget needs.

RISING CLINICAL CARE SAFETY CONCERNS:

- Pressure Injury
- Falls
- Bariatric care provision
- Impact of patient immobility
- Safety of the caregivers

DEMANDING OPERATIONAL CHALLENGES:

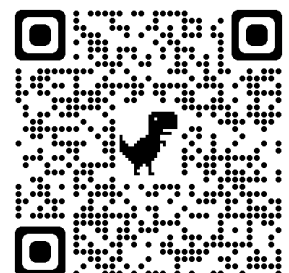

- Escalating costs
- Regulatory requirements
- Reduced number of caregivers
- Product reliability and maintenance
- Adoption of new technology

Flexible options for your facility to complete assessments independently or by our Hillrom team. The new HEPS Application is **FREE to Download** and compatible with both Android and Apple OS.
